Why do we start learning a programming language with "Hello World!"?

A **"Hello, World!" program** is generally a computer program that ignores any input and outputs or displays a message similar to "Hello, World!". A small piece of code in most programming language, this program is used to illustrate a language's basic syntax. "Hello, World!" programs are often the first a student learns to write in a given language,and they can also be used as a to ensure computer software intended to compile or run source code is correctly installed, and that its operator understands how to use it.

How is the us of comments and how do you write comments in HTML?

```
<!--This is comment in html→
```

What are elements tags and attributes and th difference between them?

HTML Tags: Tags are the starting and ending parts of an HTML element. They begin with < symbol and end with > symbol. Whatever written inside < and > are called tags.

HTML elements: Elements enclose the contents in between the tags. They consist of some kind of structure or expression. It generally consists of a start tag, content and an end tag.

HTML Attributes: It is used to define the character of an HTML element. It always placed in the opening tag of an element. It generally provides additional styling (attribute) to the element.

Briefly explain what HTML entities are?.

HTML Entities

Some characters are reserved in HTML.

If you use the less than (<) or greater than (>) signs in your text, the browser might mix them with tags.

Character entities are used to display reserved characters in HTML.
